# PLSC 503 – Spring 2021 Bootstrapping and Missing Data

March 10, 2021

### CCCC

Bootstrapping...

The population is to the sample as the sample is to the bootstrap sample.

# Practical (Nonparametric) Bootstrapping

- Draw one bootstrap sample of size *N* with replacement from the original data,
- Estimate the parameter(s)  $\tilde{\theta}_{k \times 1}$ ,
- Repeat steps 1 and 2 R times, to get  $\tilde{\theta}_r$ ,  $r \in \{1, 2, ...R\}$ , comprising elements  $\tilde{\theta}_{rk}$ ,
- Examine the empirical characteristics of the resulting distribution(s) of  $\tilde{\theta}_{rk}$ .

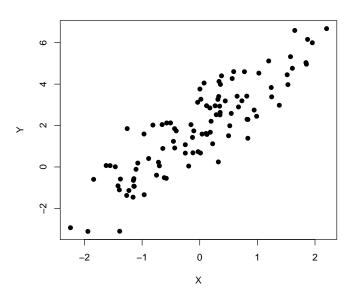

## Why Bootstrap?

- It's intuitive.
- It's simple.
- It's robust.

### Bootstrapping: "By Hand"

```
N<-100
reps<-999
set.seed(1337)
X<-rnorm(N)
Y < -2 + 2 * X + rnorm(N)
data<-data.frame(Y,X)
fitOLS<-lm(Y~X)
CI<-confint(fitOLS)
BO<-numeric(reps)
B1<-numeric(reps)
for (i in 1:reps) {
  temp<-data[sample(1:N,N,replace=TRUE),]
  temp.lm<-lm(Y~X,data=temp)
  B0[i]<-temp.lm$coefficients[1]
  B1[i]<-temp.lm$coefficients[2]
BvHandB0<-median(B0)
ByHandB1<-median(B1)
ByHandCI.BO<-quantile(B0,probs=c(0.025,0.975)) # <-- 95% c.i.s
ByHandCI.B1<-quantile(B1,probs=c(0.025,0.975))
```

### Normal Residuals...

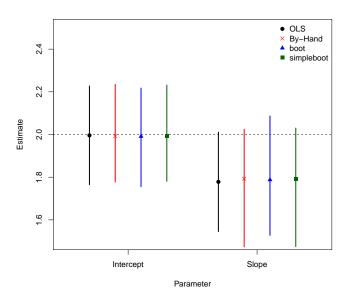

### Bootstrapping Via boot

### Bootstrapping Via simpleboot

```
library(simpleboot)
Simple<-lm.boot(fitOLS,reps)
SimpleB0<-perc(Simple,.50)[1]
SimpleB1<-perc(Simple,.50)[2]
Simple.CIs<-perc(Simple,perc(0.025,0.975))</pre>
```

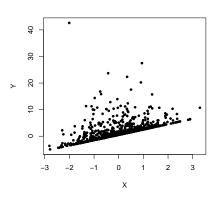

### **Bootstrapping Results**

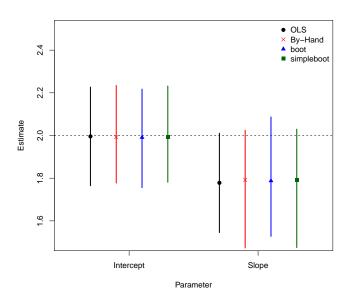

### Bootstrapping: Skewed Residuals

```
N<-100
reps<-999
```

set.seed(1337)
X<-rnorm(N)
ustar<-rchisq(N,2) # <- skewed u.s
y<-2+2\*X\*(ustar-mean(ustar))
data<-data.frame(Y,X)
fitULS<-lm(Y-X)
CI<-confinit(fitOLS)</pre>

### Skewed Residuals: Results

### **Bootstrapping Resources**

#### R things:

- A simple introduction at StatMethods
- Bootstrap in R (at DataCamp)
- Packages: boot, bootstrap, simpleboot, car::Boot, broom (tidy), many more

#### Other Resources:

- Efron's original (1979) paper
- Chernick and Labudde (2011) (a solid R-based bootstrapping book)
- Many other books, etc.

# **Missing Data**

### Missing Data, Part I: Why?

### Why are data missing?

- The observation itself does not exist
- Data don't exist for that observation
- Data exist, but are impossible to measure
- Data exist, but were not measured

### Missing Data, Part II: Flavors

Notation:

$$X_i \in \{W_i, Z_i\}$$

 $\mathbf{W}_i$  have some missing values,  $\mathbf{Z}_i$  are "complete"

$$R_{ik} = egin{cases} 1 & ext{if } W_{ik} ext{ is missing,} \ 0 & ext{otherwise.} \end{cases}$$

$$\pi_{ik} = \Pr(R_{ik} = 1)$$

### Missing Data, Part II: Rubin's Flavors

Missing completely at random ("MCAR"):

$$\textbf{R} \perp \{\textbf{Z}, \textbf{W}\}$$

Missing at random ("MAR"):

$$\mathbf{R} \perp \mathbf{W} | \mathbf{Z}$$

Anything else is "informatively" (or "non-ignorably," or sometimes "MNAR") missing.

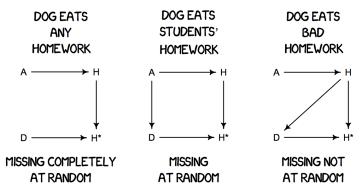

### MCAR vs. MAR vs. MNAR, Explained

H: Homework

H\*: Homework with missing values

A: Attribute of student

D: Dog (missingness mechanism)

(Source)

### Missing Data: Consequences

#### In general:

#### MCAR:

- · Missing data are a fully random sample of all the data
- $\cdot \to \mathsf{Missingness}$  does not bias  $\hat{\theta}$ , but
- · There is some loss of information (and therefore efficiency)

#### MAR

- · Missing data are a nonrandom sample of all the data
- · Ignoring missingness can lead to bias in  $\hat{\theta}$ , but
- · Conditioning on the variable(s) that drive the missingness can eliminate the bias

#### • Informative Missingness / MNAR

- · Missing data are a nonrandom sample of all the data
- · Ignoring missingness can lead to bias in  $\hat{\theta}$
- · In general, conditioning cannot eliminate the bias

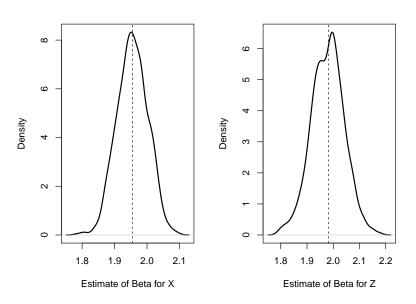

### Example, Simulated

```
> set.seed(7222009)
> Npop <- 1000
> X<-runif(Npop,0,10) # NOTE: X, Z are correlated a bit...
> Z<-(0.3*X)+(0.7*runif(Npop,0,10))
> Y<-0+(2*X)+(2*Z)+rnorm(Npop,mean=0,sd=4)</pre>
> DF<-data.frame(X=X,Z=Z,Y=Y)
> fit.pop<-lm(Y~X+Z,DF)</pre>
> summary(fit.pop)
Coefficients:
           Estimate Std. Error t value Pr(>|t|)
(Intercept) 0.4051 0.3260 1.24
                                          0.21
Х
             1.9553 0.0466 41.97 <2e-16 ***
7.
             1.9812 0.0617 32.09 <2e-16 ***
Signif. codes: 0 '*** 0.001 '** 0.01 '* 0.05 '.' 0.1 ' ' 1
Residual standard error: 3.98 on 997 degrees of freedom
Multiple R-squared: 0.823, Adjusted R-squared: 0.823
F-statistic: 2.32e+03 on 2 and 997 DF, p-value: <2e-16
```

#### Simulated MCAR

```
> pmis < -0.50
> DF$Ymcar<-rbinom(Npop,1,pmis)</pre>
> DF$Ymcar<-ifelse(DF$Ymcar==1,NA,DF$Y)</pre>
>
> # Regression w/listwise deletion:
>
> fit.s<-lm(Ymcar~X+Z,DF) # <-- looks fine
> summary(fit.s)
Coefficients:
           Estimate Std. Error t value Pr(>|t|)
(Intercept) 0.4442 0.4653 0.95 0.34
Х
             1.9661 0.0658 29.87 <2e-16 ***
             1.9763 0.0862 22.92 <2e-16 ***
Signif. codes: 0 '*** 0.001 '** 0.01 '* 0.05 '.' 0.1 ' ' 1
Residual standard error: 4 on 507 degrees of freedom
  (490 observations deleted due to missingness)
Multiple R-squared: 0.822, Adjusted R-squared: 0.821
F-statistic: 1.17e+03 on 2 and 507 DF, p-value: <2e-16
```

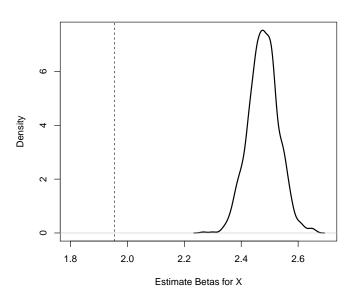

### Do That A Bunch Of Times...

#### Simulated MAR Y

```
> set.seed(7222009)
> DF$Ymar<-rbinom(Npop,1,(DF$Z/10))</pre>
> DF$Ymar<-ifelse(DF$Ymar==1,NA,DF$Y)</pre>
>
> summary(lm(Ymar~X,DF))
Coefficients:
           Estimate Std. Error t value Pr(>|t|)
(Intercept) 3.6600 0.3610 10.1 <2e-16 ***
             2.9923 0.0648 46.2 <2e-16 ***
Х
Signif. codes: 0 '*** 0.001 '** 0.01 '* 0.05 '.' 0.1 ' ' 1
Residual standard error: 4.75 on 547 degrees of freedom
  (451 observations deleted due to missingness)
Multiple R-squared: 0.796, Adjusted R-squared: 0.795
F-statistic: 2.13e+03 on 1 and 547 DF, p-value: <2e-16
```

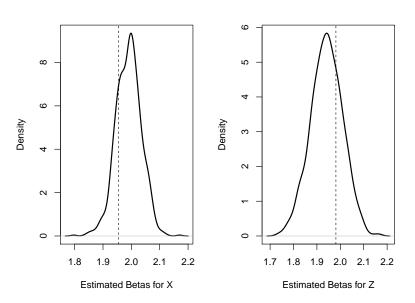

### Do That A Bunch Of Times...

#### More MAR: Add Z...

```
> summary(lm(Ymar~X+Z,DF))
Call:
lm(formula = Ymar ~ X + Z, data = DF)
Coefficients:
           Estimate Std. Error t value Pr(>|t|)
(Intercept) 0.2529
                       0.4367 0.58 0.56
            2.0200 0.0663 30.49 <2e-16 ***
X
            1.9499 0.0979 19.91 <2e-16 ***
Signif. codes: 0 '*** 0.001 '** 0.01 '* 0.05 '.' 0.1 ' ' 1
Residual standard error: 4.02 on 499 degrees of freedom
  (498 observations deleted due to missingness)
Multiple R-squared: 0.801, Adjusted R-squared:
F-statistic: 1e+03 on 2 and 499 DF, p-value: <2e-16
```

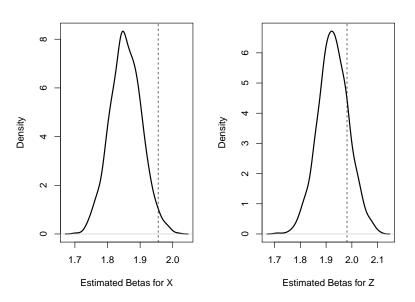

### Do That A Bunch Of Times...

### Informative Missingness / "MNAR"

```
> set.seed(7222009)
> DF$Yim<-rbinom(Npop,1,rescale(DF$Z-(4*DF$Y)))</pre>
> DF$Yim<-ifelse(DF$Yim==1,NA,DF$Y)</pre>
>
> summary(lm(Yim~X+Z,DF))
Coefficients:
           Estimate Std. Error t value Pr(>|t|)
(Intercept) 2.0518 0.5463 3.76 0.00019 ***
           1.8420 0.0671 27.45 < 2e-16 ***
X
             1.9171 0.0859 22.32 < 2e-16 ***
Signif. codes: 0 '*** 0.001 '** 0.01 '* 0.05 '.' 0.1 ' ' 1
Residual standard error: 3.85 on 465 degrees of freedom
  (532 observations deleted due to missingness)
Multiple R-squared: 0.797, Adjusted R-squared: 0.796
F-statistic: 911 on 2 and 465 DF, p-value: <2e-16
```

### Do That A Bunch Of Times...

### How Much Missing Data Is A Problem?

"It is often supposed that there exists something like a critical missing rate up to which missing values are not too dangerous. The belief in such a global missing rate is rather stupid."

- Vach (1994, 113)

### What to Do About Missing Data?

- Listwise Deletion...
- Mean Substitution / Imputation
- "Nearest Neighbor" methods
- "Hot Deck" Imputation
- Multiple Imputation
- Model-Based Solutions

#### MAR Data

For MAR data:

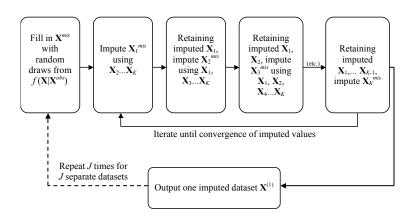

$$R \perp W|Z$$

so W and Z factorize independently.

Sources of variation we need to consider:

- 1. Prediction
- 2. Predictive variation
- 3. Parameter variation / uncertainty

### MAR: Multiple Imputation

#### Original Data X With Missing Data

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	X <sub>11</sub>	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	•	$X_{22}$	$X_{32}$	•		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	•	$X_{43}$		$X_{K3}$
4	X <sub>14</sub>	•	$X_{34}$	$X_{44}$		$X_{K4}$
5	•	$X_{25}$	$X_{35}$	•		•
6	X <sub>16</sub>	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:	:	:	:	:	:
•		•	•	•	•	•
Ν	X <sub>1 N</sub>	$X_{2N}$	X3M	XAN		XKN

#### **Iteration One:**

Step One: "Fill In" Missing Values of X

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	X <sub>11</sub>	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	$R_{12}$	$X_{22}$	$X_{32}$	$R_{42}$		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	$R_{33}$	$X_{43}$		$X_{K3}$
4	$X_{14}$	$R_{24}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$R_{15}$	$X_{25}$	$X_{35}$	$R_{45}$		$R_{K5}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:		•	•			:
•		•	•	•	•	
Ν	X <sub>1N</sub>	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$
	T / V	Z/V	3/4	+/V		/\/V

Step Two: Use  $\{X_2, X_3, ... X_K\}$  To Impute  $X_1^{mis}$ 

			.,	.,		
	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	$X_{11}$	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	$I_{12}^{(1)}$	$X_{22}$	$X_{32}$	$R_{42}$		$X_{K2}$
3	$X_{13}$	$X_{23}$	$R_{33}$	$X_{43}$		$X_{K3}$
4	$X_{14}$	$R_{24}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$I_{15}^{(1)}$	$X_{25}$	$X_{35}$	$R_{45}$		$R_{K5}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:	:	:	:	:	:
•	-	•	•	•	•	•
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

Step Three: Use The Imputed  $X_1$ , Along With  $\{X_3, X_4, ... X_K\}$  To Impute  $X_2^{\text{mis}}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	$X_{11}$	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	$I_{12}^{(1)}$	$X_{22}$	$X_{32}$	$R_{42}$		$X_{K2}$
3	$X_{13}$	$X_{23}$	$R_{33}$	$X_{43}$		$X_{K3}$
4	$X_{14}$	$I_{24}^{(1)}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$I_{15}^{(1)}$	$X_{25}$	$X_{35}$	$R_{45}$		$R_{K5}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:	:	:	:	:	:
•		•	•	•	•	•
Ν	X <sub>1N</sub>	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

Step Four: Use The Imputed  $X_1$  and  $X_2$ , Along With  $\{X_4,...X_K\}$  To Impute  $X_3^{\text{mis}}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	$X_{11}$	$X_{21}$	$X_{31}$	$X_{41}$		$X_{K1}$
2	$I_{12}^{(1)}$	$X_{22}$	X <sub>32</sub>	$R_{42}$		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	$I_{33}^{(1)}$	$X_{43}$		$X_{K3}$
4	$X_{14}$	$I_{24}^{(1)}$	X <sub>34</sub>	$X_{44}$		$X_{K4}$
5	$I_{15}^{(1)}$	$X_{25}$	X <sub>35</sub>	$R_{45}$		$R_{K5}$
6	$X_{16}$	$X_{26}$	X <sub>36</sub>	$X_{46}$		$X_{K6}$
:	:	:	:	:	:	:
•	-	•	•	•	•	•
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

(etc.)

Step K + 1: Use The Imputed  $X_1, X_2, ... X_{K-1}$  To Impute  $X_K^{mis}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	X <sub>11</sub>	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	$I_{12}^{(1)}$	$X_{22}$	$X_{32}$	$I_{42}^{(1)}$		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	$I_{33}^{(1)}$	$X_{43}$		$X_{K3}$
4	X <sub>14</sub>	$I_{24}^{(1)}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$I_{15}^{(1)}$	$X_{25}$	$X_{35}$	$I_{45}^{(1)}$		$I_{\kappa \epsilon}^{(1)}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:	:		:	:	-
•		•	•	•	•	-
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

#### **Iteration Two:**

Step One: Use The Imputed  $X_2, X_3, ... X_K$  To Impute  $X_1^{\text{mis}}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	$X_{11}$	$X_{21}$	X <sub>31</sub>	X <sub>41</sub>		$X_{K1}$
2	$I_{12}^{(2)}$	$X_{22}$	$X_{32}$	$I_{42}^{(1)}$		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	$I_{33}^{(1)}$	$X_{43}$		$X_{K3}$
4	$X_{14}$	$I_{24}^{(1)}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$I_{15}^{(2)}$	$X_{25}$	$X_{35}$	$I_{45}^{(1)}$		$I_{K5}^{(1)}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:		:	:	:	:	:
•	•	•	•	•	•	•
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

Step Two: Use The Imputed  $X_1, X_3, ... X_K$  To Impute  $X_2^{mis}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	X <sub>11</sub>	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$
2	$I_{12}^{(2)}$	X <sub>22</sub>	$X_{32}$	$I_{42}^{(1)}$		$X_{K2}$
3	X <sub>13</sub>	$X_{23}$	$I_{33}^{(1)}$	$X_{43}$		$X_{K3}$
4	X <sub>14</sub>	$I_{24}^{(2)}$	$X_{34}$	$X_{44}$		$X_{K4}$
5	$I_{15}^{(2)}$	$X_{25}$	X <sub>35</sub>	$I_{45}^{(1)}$		$I_{K5}^{(1)}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:		:	:	:	:
•	•	•	•	•	•	•
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		$X_{KN}$

# (etc.)

Step K: Use The Imputed  $X_1, X_2, ... X_{K-1}$  To Impute  $X_K^{mis}$ 

i	$X_1$	$X_2$	$X_3$	$X_4$		$X_K$
1	X <sub>11</sub>	$X_{21}$	X <sub>31</sub>	$X_{41}$		$X_{K1}$

5	$I_{15}^{(2)}$	$X_{25}$	$X_{35}$	$I_{45}^{(2)}$		$I_{K5}^{(2)}$
6	$X_{16}$	$X_{26}$	$X_{36}$	$X_{46}$		$X_{K6}$
:	:	:	:	:	:	:
•		•	•	•	•	•
Ν	$X_{1N}$	$X_{2N}$	$X_{3N}$	$X_{4N}$		X <sub>KN</sub>

### Multiple Imputation: Summary

- Repeat this process for  $J \approx 10$  iterations until convergence of the  $I_{\rm Li}^{(j)}$ s.
- Output the resulting imputed data  $\mathbf{X}^{(1)}$ .
- Repeat this entire process M times to create M imputed datasets  $\{\mathbf{X}^{(1)}, \mathbf{X}^{(2)}, ... \mathbf{X}^{(M)}\}.$
- Rule of thumb: M ≥ the percentage of cases in your data with missingness.
- Estimate models and conduct inference using multiple analysis and model averaging (see e.g. Schafer 1997, Ch. 4).

#### MNAR Data

For MNAR data:

$$Pr(\mathbf{R}) = f(\mathbf{W}, \mathbf{Z})$$

i.e., missingness is nonignorable.

Common causes / situations:

- Omitted variables (→ can't condition on all elements of Z)
- Differential response due to unmeasured factors
- Truncation / censoring

#### MNAR and Model-Based Solutions

For MNAR data, we must model the joint distribution Pr(X, R)...

#### Approaches:

- Selection model: Pr(X, R) = Pr(X) Pr(R|X)
  - · E.g., Heckman (1976, 1979, etc.)
  - · Specifies a (usually, regression) model for  $Pr(\mathbf{R} \mid X)$

• Pattern-Mixture model: 
$$Pr(\mathbf{X}, \mathbf{R}) = Pr(\mathbf{X}|\mathbf{R}) Pr(\mathbf{X})$$
  
=  $Pr(\mathbf{X}|\mathbf{R} = 0) Pr(\mathbf{R} = 0) + Pr(\mathbf{X}|\mathbf{R} = 1) Pr(\mathbf{R} = 1)$ 

- · E.g., Glynn, Laird, and Rubin (1986)
- · Mixture-type model across "responders" and "non-responders"
- Others... [see, e.g., Little and Rubin (2002)]

### Missing Data Resources, R and Otherwise

- The Missing Data CRAN Task View
- Packages:
  - · Amelia
  - · mi, mice, and miceFast
  - miceMNAR (MNAR imputation using a Heckman-style selection model)
  - naniar (tidy-cult, but enables cool visualizations)
  - VIM (joint visualization and imputation of missing data; also used to have a GUI)
  - · Many others...
- van Buuren's Flexible Imputation of Missing Data e-book
